SUMMARY

Aspiring software developer with a strong foundation in Python, machine learning, and data analytics. Experienced in building data-driven applications and working with machine learning models, with exposure to security-related problem domains such as anomaly detection and phishing detection. Focused on developing practical solutions and continuously strengthening core technical skills.

SKILLS

Languages:	Python, Java, SQL, HTML, CSS, JavaScript
Frameworks & Libraries:	React.js, Pandas, NumPy, Scikit-learn
Tools:	Git, GitHub, VS Code
Core Areas:	Machine Learning, Data Analysis

PROJECTS

Network Anomaly Detection System

- Developed a system to analyze packet-level network traffic data and flag abnormal patterns using unsupervised ML techniques.
- Applied Isolation Forest algorithm for anomaly detection after data preprocessing and feature extraction on network datasets.
- Improved detection pipeline by reducing noise in features, resulting in cleaner separation of anomalous vs. normal traffic.

URL Phishing Detection System

- Built a binary classification model to distinguish malicious from legitimate URLs using extracted lexical and URL-based features.
- Trained and evaluated models including Logistic Regression and Decision Tree; compared performance using accuracy metrics.
- Strengthened practical understanding of threat detection and supervised classification in a cybersecurity context.

Izumi Inventory Management System

- Developed a Python-based inventory application with MySQL backend, supporting full CRUD operations for product data.
- Designed a functional CLI interface for adding, updating, searching, and deleting inventory records efficiently.
- Structured the codebase with modular functions to separate database logic from application logic.

EDUCATION

B.Tech in Computer Science Engineering

2023 – 2027

SRM University, Chennai

Higher Secondary Education (12th Grade)

79%

Velammal Vidhyashram
